

Project, FE 524

FE524: Prompt Engineering Lab for Business Applications

DUE: May 14, 2026

Your project should be something of reasonable complexity and scope that uses Python with concepts from our course to solve some business problem that's similar in scale to something we've discussed in the course.

This is a group project. We're aiming for 3-4 members per group.

Your project proposal and final write-up should include:

- A list of the group members
- A description of the business problem that the project aims to solve
- A description of the documents or data files that the project will use to achieve it's objective
- A description of how model outputs will be evaluated for accuracy in your solution

Deadlines:

- March 21: Groups submit a list of their group members through Canvas
- March 28: Groups submit their project proposal through Canvas
- May 14: Groups submit their completed project files through Canvas (Python files, data files, PDFs, etc)
- May 15: Groups provide brief 5-minute presentations / demos of their project

Deliverables:

- **[40/50] pts.** — Project source code files, incl. data files and output accuracy analysis (and proposal)
- **[05/50] pts.** — Brief write-up / summary describing what your project does (PDF)
- **[05/50] pts.** — Presentation / demo

Submit any file deliverables through Canvas to the assignment named "Final Project".
